This withdrawal notice has been updated in March 2025.

The article “Transformation of cuprite to tenorite through a martensitic-like type process in copper-doped glasses annealed in reduced atmosphere with the metal copper formation”, available online on August 24, 2023 in Boletín de la Sociedad Española de Cerámica y Vidrio has been withdrawn at the request of the Editor-in-Chief, Amador C. Caballero. The withdrawal has been decided upon following an investigation into concerns raised by a third party, which revealed significant redundancy in primary data and simultaneous submission with another published article by an overlapping group of authors elsewhere [<https://doi.org/10.1111/jace.19507>].

The authors were informed of the decision to withdraw the article. Dr. Celia Marcos did not agree to the withdrawal and the wording of the notice.

The full Elsevier Policy on Article Withdrawal can be found at <https://www.elsevier.com/about/policies/article-withdrawal>
