

RETRACTED: Without preoperative embolization: Long-term outcomes following subadventitial dissection and ICA–CCA bypass in a single-center retrospective study

Farid Gojayev*, Adil Polat

Department of Cardiovascular Surgery, Bagcilar Training and Research Hospital, İstanbul, Turkey

This article has been retracted. Please see Elsevier's Policy on Article Withdrawal (<https://www.elsevier.com/about/policies/article-withdrawal>).

The article has been retracted at the authors' request because, after publication, they identified factual and methodological errors in the manuscript. Specifically, not all 13 patients included in the study were from the same institution, although the article described the research as a single-center retrospective study. Some patients were operated on at another hospital. Therefore, the description of the study design and data source is inaccurate.

The authors sincerely apologize to the editors and readers for this error.
